ATIF KHAN

Bhopal, Madhya Pradesh, India | atif64896@gmail.com | github.com/atifixation | atifixation.github.io/new-work

PROFESSIONAL SUMMARY

B.Tech Artificial Intelligence & Data Science student (2024–2028) and part-time researcher with hands-on full-stack MERN development and applied machine learning experience. Built and deployed web applications and AI projects including an image-classification plant disease detector, an AI resume analyzer and a video-editing pipeline. 3rd place, RICR Hackathon. Seeking a Software Development internship.

EDUCATION

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal 2024 – 2028
B.Tech in Artificial Intelligence & Data Science (LNCT Bhopal) | CGPA: 7.45 | 5th Semester
Relevant Coursework: Data Structures, DBMS, Operating Systems, Software Engineering, Data Science

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL
Frontend: React.js, Vite, Tailwind CSS, daisyUI, React Router, HTML5, CSS3, Angular (basics)
Backend & Databases: Node.js, Express.js, REST APIs, Flask, Spring Boot (basics), MongoDB, SQL
AI, ML & Data: Machine Learning, Deep Learning (CNN, EfficientNet), TensorFlow (basics), Pandas, NumPy, OpenCV, Data Analysis
Tools & Deployment: Git, GitHub, GitHub Pages, VS Code, FFmpeg, CORS configuration, API documentation

EXPERIENCE

Part-Time Researcher | Techtonic, Bhopal (Software Engineering Studio) Part-Time

- Conduct B2B lead generation and data enrichment, compiling and structuring Bhopal business leads and European B2B leads in spreadsheets for outreach.
- Assisted in developing and updating the company website.

PROJECTS

Cravings | MERN Stack, React, Vite, Tailwind CSS v4, daisyUI, MongoDB

- Developing a food discovery and delivery platform with restaurant discovery, ranking and mood/ambience-based exploration.
- Built the React (Vite) frontend with React Router and a Node.js/Express REST API backed by MongoDB.
- Debugged import errors and CORS configuration, fixed API documentation mismatches and deployed the application.

CareerLens | AI Resume Analyzer & Mock Interview Platform | Hack in Motion Hackathon

- Developed the frontend of an AI-powered platform that analyzes resumes and runs mock interviews for job seekers.

AgroScan AI | EfficientNet-B4, Flask, React PWA | Ideathon 2K26

- Built a plant disease detection system using an EfficientNet-B4 deep learning model trained on the PlantVillage dataset.
- Served the model through a Flask API with a React Progressive Web App interface, and presented it as a hackathon submission.

ReelForge AI | Python, OpenCV, FFmpeg, NumPy

- Built a 20-module autonomous cinematic reel editing pipeline using computer vision and video processing.
- Pitched the product to the founders of VideoVerse and Predis.ai through cold outreach.

Anonymous Confession Hub | MERN Stack, MongoDB, Express.js, React, Node.js

- Created a full-stack platform for anonymous posts with a React interface, Express/Node.js APIs and MongoDB data storage.

ArogyaSathi | Healthcare Project (Team)

- Contributed to a healthcare-focused software solution as part of a project team.

FrameByFrame Portfolio | HTML, CSS, GitHub Pages

- Designed, built and deployed a responsive personal portfolio on GitHub Pages showcasing film, books and storytelling work.

ACHIEVEMENTS & CERTIFICATIONS

- **3rd Place, Project Category** at the RICR Hackathon.
- **Hackathons:** Hack in Motion (CareerLens), Ideathon 2K26 (AgroScan AI).
- **Certifications:** Google Cloud (Introduction to Large Language Models), Google Business Security, Cisco (IP Network, Networking Basics, Modern AI Introduction), Deloitte Data Analytics Job Simulation.
- Completed web development and Python learning tracks on freeCodeCamp, HackerRank and IBM SkillsBuild.

ADDITIONAL

- **Creative Work:** Founder of FrameByFrame (cinematic video content) and @atifrecommends (books, film, psychology); co-author of the novel The Frequency of the Dead. Interests: screenwriting, creative writing, filmmaking.
